Dragonflies

Dragonflies are insects. They can be lots of different colours like red, green, yellow and blue.

Dragonflies have long bodies. They have two pairs of wings and large eyes.

Dragonflies are great fliers and can fly up to 30 mph!

Like all insects, dragonflies have a head, a thorax and an abdomen. They also have six legs.

Dragonflies can be found all over the world. They like to live in warm places.

Dragonflies eat other insects like mosquitoes, flies, and beetles. They are great at catching food because they can see in all directions.
