## The 2 Times Table

1. Jungle Jim is finding animals with pairs of wings. Altogether, he has counted 36 wings and found 4 different types of birds - toucans, parrots, cockatoos and parakeets.

Explore the different combinations of birds he could have found and write the matching multiplication sentences to show this.

2. Cut out the cards below with a partner and place them face down. Take it in turns to choose two cards, matching the multiplication with its answer. If they match, keep the pair.
